The U.S. lift Truck division based in Cleveland has a skilled team experienced in Product Sales, Purchasing, Marketing, Logistical and Technical Support.

At first the domestic forklift marketplace in Korea was an open import enterprise. Korea Machinery Co. Ltd. begun in 1960, to import fully assembled lift trucks as part of a home-based machinery expansion venture. Sales of these goods were primarily targeted to state-run corporations, large scale organizations, and the armed forces. This ultimately led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced trade operations throughout Korea to service and sell this heavy equipment. By 1978, a forklift production plant was successfully completed. Continuous technical education grew to become the new focus for enhancing quality and product development.

Domestic lift truck trade for Daewoo started in 1967 and grew to an astonishing 90% market share in Korea. By the 1980's, Daewoo's superior technological enhancements combined with sales success placed them in a situation of significant expansion of their forklift business.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a joint venture project to help them in the very competitive North American materials handling market. This joint-venture proved highly successful for Daewoo and their forklift sales expanded greatly. In 1984, the company completed construction of a new facility to help in manufacturing high end value-added goods for export. In 1993, the company had a international sales network and started exporting designs they had developed through in-house expertise, as an sovereign brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing growth possibilities into overseas markets.
